PROFILE

B.Tech IT undergraduate with hands-on experience building practical, user-focused web applications. Solid grasp of Data Structures & Algorithms (100+ problems solved), currently expanding into React and Redux to craft seamless front-end experiences.

EDUCATION

Amity University 2024 – 2028
B.Tech, Information Technology — CGPA: 8.3 *Lucknow, UP*
Expected Graduation: *May 2028*

City Montessori School 2023 – 2024
Intermediate (ISC) — 92.75% *Lucknow, UP*

City Montessori School 2021 – 2022
Matriculation (ICSE) — 96% *Lucknow, UP*

SKILLS

Languages: Java, Python (Basic), JavaScript, HTML, CSS

Frameworks & Tools: Bootstrap, Git, GitHub, Visual Studio Code

Coursework: DBMS, Operating Systems, Computer Networks, Software Engineering

Soft Skills: Leadership, Problem Solving, Teamwork, Communication

PROJECTS

AI Resume Analyzer (ResumePilot) *Python, Flask, HTML, CSS, JavaScript, PyPDF2*
GitHub | Live Demo

- Built a web app to solve a common problem for job seekers — not knowing why their resume gets filtered out by ATS systems or how well it actually matches a specific job.
- Engineered a Flask/Python backend that extracts text from PDF resumes (PyPDF2), matches keywords against a given job description, and computes an ATS-compatibility score in real time.
- Unlike generic resume checkers, feedback is tied to the exact job description provided, giving personalized suggestions instead of one-size-fits-all tips.

TeamUp – Student Team-Finding Platform *React.js, JavaScript, Vite, HTML, CSS*
GitHub | Live Demo

- Built to solve a common student problem — finding teammates with the right skills and interests for hackathons and competitions — by giving them one place to post and discover team openings.
- Students post required skills, vacancies, and contact details; others search and filter to find a team. Built with React (Vite).
- First version is live on Render; posts use browser LocalStorage for now, with a shared database and authentication planned.

FitNest – Health & Wellness Website *HTML, CSS, JavaScript, Bootstrap*
GitHub | Live Demo

- Built a website that brings common health tools — BMI calculator, water intake calculator, and workout and nutrition suggestions — into one easy-to-use platform, instead of users searching multiple apps or sites.
- Users enter simple details like height, weight, fitness goal, and activity level to get rule-based recommendations, plus general wellness guidance; built with Bootstrap and hosted on GitHub Pages.

ACHIEVEMENTS & LEADERSHIP

- Participated in multiple hackathons, gaining hands-on experience in rapid prototyping and teamwork.
- Member, Student Council — collaborated with peers to organize and coordinate school-level events and initiatives.
- Participant, JYEP (Junior Youth Empowerment Program) — developed leadership and communication skills.
